

# FOUND YOU

create for better life

## PROBLEM SPACE

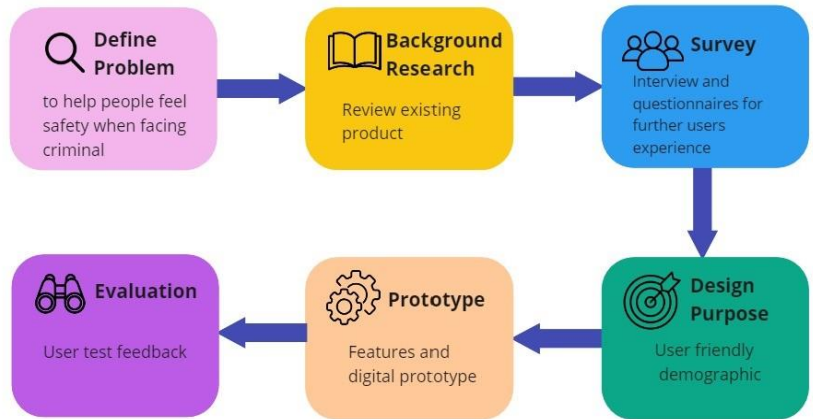

We are going to delve into the problem of crime. Combine modern technology with crime prevention or predictive policing, such as helping people call the police more safely and quickly. In our observation and investigation, it is a high-risk action to call the police in dangerous situations because it will increase the risk of injury. In the criminals, people cannot make a sound as usual. This means that the call is successful, the police will not be able to grasp the situation in the first place. FoundYou application will solve this problem to help the victims.

## WHAT IS FOUNDYOU?

FoundYou is a mobile application that provides a platform for police to assist them with policing and finding criminals in limited areas. The design presents an opportunity for owners to update the crimes and be positively effective in policing. The mixture of technology and predictive analysis to find opportunities against criminal activities much easier.

## DESIGN PROCESS

## RESEARCH

The research 2013 research by Perry et al., captures the essence of predictive policing. Their conceptualization of predictive policing is broad. It not only focuses on predicting the place in which crime might be committed but also focuses on identifying the perpetrators behind criminal activity by the use of technology and prediction models.

According to Pearsall, community policing is vital for the success of predictive policing. This is true since predictive policing is mainly about the analysis of data. This data is collected from various sources, such as social media, police data, and feedback from people living in crime hotspots such as reports of criminal activities

## PROTOTYPE

## FUTURE PLAN

Database for FoundYou will be build and caregivers to store information. User should be able to combine recording voice into documents.
